Loaded for 10 PSF non-concurrent moving BCLL. Loaded for 20 01 b non-concurrent moving BCLL. Mark all interior bearing locations. Install interior support(s) before erection. This design based on chord bracing applied per the following schedule:  TC 12.00" -2-0 28-0-0 BC 12.00" -0-0 26-0-0 Galvanization: G60 Install interior support(s) before erection. This design based on chord bracing applied per the following schedule:  TC 12.00" -2-0 28-0-0 Galvanization: G60 Install interior support(s) before erection. This design based on chord bracing applied per the following schedule:  TC 12.00" -2-0 28-0-0 Galvanization: G60 Install interior support (s) before erection. This design based on chord bracing applied per the following schedule:  TC 12.00" -2-0 28-0-0 Galvanization: G60 Install interior support (s) before erection. This design based on chord bracing applied per the following schedule:  TC 12.00" -2-0 28-0-0 Galvanization: G60 Install interior support (s) before erection. This design based on chord bracing applied per the following schedule:  TC 12.00" -2-0 28-0-0 Galvanization: G60 Install interior support (s) before erection. This design based on chord bracing applied per the following schedule: TC 12.00" -2-0 0 28-0-0 Galvanization: G60 Install interior beaution at the following schedule: TC 12.00" -2-0 0 28-0-0 Galvanization: G60 Install interior beaution at the following schedule: TC 12.00" -2-0 0 28-0-0 TC 12.00" -2-0 0 10 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0

Each connection requires 3/8" diameter proprietary bolt supplied by NUCONSTEEL SCRWS = The required number of double-sided #14 screws at each end of the truss member: SP = Spacer supplied by NUCONSTEEL

## WARNING Read all notes on this sheet and verify all design parameters. Truss design on this sheet is only valid with NUTRUSS sections and is for an individual building component, not a truss system. Bracing

shown on this drawing is not erection bracing, wind bracing, portal bracing or similar bracing which is part of the building design and which must be considered by the building designer. Bracing shown is lateral bracing of truss members only. Any additional bracing, temporary and/or permanent, is the responsibility of the truss erector and/or the building designer. The Professional Engineer's seal indicates only that the truss assembly shown on this sheet meets the acceptable design criteria for the loads, loading condition, truss configuration and spans specified.

When the specified screw count cannot be achieved at the chord to web connections, a 16 gauge gusset plate must be added on both sides of the connection. Typically, gusset plates are at pitch break joints." Min. screw spacing = 9/16" and min. edge distance = 9/16".
